Differential abundance analysis

Analysis information:

- Taxonomic level: species_prevalent

Taxa that are less prevalent than this (in relabundance) have been agglomerated:

- Detection threshold: 0.001
- Prevalence threshold: 0.1
- Number of taxonomic groups: 215

Number of significant findings within time points (Kruskal test, Benjamini-Hochberg FDR adjustment).

```
before  after
     0      5
```

Number of significant findings within treatments (Paired Wilcoxon test, Benjamini-Hochberg FDR adjustment).

```
rice  oat
  16    2
```

Let us look more closely to the significant hits. The logFC corresponds to logFC in CLR (tp2-tp1).

For a complete table of results, see complete results
