

DAA with MAasLin 3

Differential abundance analysis

- Group variable: **diet**
- Formula used: $\sim \text{diet} * \text{time}$

Table 1: Table of significant features

feature	metadata	value	coef	qval_individual	qval_joint	model
PWY.5367...	diet	2	-2.010	0.070	0.092	prevalence
PWY.6284...	diet	2	-2.010	0.070	0.092	prevalence
PWY.6284...	diet	2	-0.593	0.546	0.092	abundance
PWY.5367...	diet	2	-0.634	0.628	0.092	abundance
