

The diagram illustrates a mapping between two rectangular regions. The left rectangle has a horizontal line near its bottom, and the right rectangle has a horizontal line near its top. Points are marked on the top and bottom edges of both rectangles. Colored lines connect these points: a blue line connects the top-left point to the top-right point; orange lines connect the top-left point to the top-right point and the bottom-left point to the bottom-right point; purple lines connect the top-left point to the bottom-right point and the bottom-left point to the top-right point. The background is a light gray grid.
