

The diagram illustrates a complex network of connections between two vertical rectangular structures. The left rectangle is divided into two sections by a horizontal line, with three points in the top section and three in the bottom section. The right rectangle is also divided, with three points in the top section and three in the bottom section. A series of colored lines connect these points and extend upwards from the top of each rectangle. A red line connects the topmost point of the left rectangle to the topmost point of the right rectangle. An orange line connects the second point from the top of the left rectangle to the second point from the top of the right rectangle. A purple line connects the third point from the top of the left rectangle to the third point from the top of the right rectangle. A light blue line connects the fourth point from the top of the left rectangle to the fourth point from the top of the right rectangle. The diagram is set against a light gray grid background.
