

The diagram illustrates a transformation of a graph structure, likely representing a change in a network or a mapping between two states. It is divided into two vertical sections: 'before' on the left and 'after' on the right, separated by a vertical line.

Before State (Left):

- A vertical line contains several black dots representing nodes.
- A rectangular box encloses a subset of these nodes, specifically the middle four dots.
- A horizontal line passes through the middle of the box, connecting the left and right sides of the box.

After State (Right):

- A vertical line contains several black dots representing nodes.
- A rectangular box encloses a subset of these nodes, specifically the middle four dots.
- A horizontal line passes through the middle of the box, connecting the left and right sides of the box.

Connections (Edges):

- Red lines connect nodes between the 'before' and 'after' states, indicating a specific mapping or transformation.
- Blue lines connect nodes between the 'before' and 'after' states, indicating another mapping or transformation.
- Orange lines connect nodes between the 'before' and 'after' states, indicating a third mapping or transformation.

The diagram shows how the structure of the graph changes from the 'before' state to the 'after' state, with nodes and edges being reconnected or repositioned.
