

The diagram shows two vertical columns of nodes. The left column has 10 nodes, with the top 5 being red and the bottom 5 being blue. The right column also has 10 nodes, with the top 5 being red and the bottom 5 being blue. Edges connect nodes between the two columns. A thick red edge connects the top red node on the left to the top red node on the right. Other edges are shown in light red and light blue, representing different possible matchings or connections between the two sets of nodes.
