Alternate analyses

- **Beta (Estimate)**: Shows the effect size and direction of a predictor on the outcome. Positive means an increase, negative a decrease.
- **95% CI**: Range where the true beta is likely to fall, reflecting precision.
- **p-Value**: Tests if beta differs from zero; $p < 0.05$ suggests significance.

Paired test between timepoints (1 and 2)	Beta	95% CI ¹	p-value
