

The diagram shows two vertical timelines, one for 'before' and one for 'after'. At the 'before' timepoint, there is a single black dot representing an entity. This entity is shown as two overlapping rectangles (one light blue, one light red) at a later point in time. At the 'after' timepoint, there are two distinct black dots representing separate entities. These two entities are shown as two overlapping rectangles (one light blue, one light red) at a later point in time. Lines connect the 'before' entity to the 'after' entities, illustrating that a single entity at one timepoint can become multiple entities at a later timepoint.
