

The diagram illustrates a point cloud transformation. On the left, labeled "before", is a point cloud with a central vertical axis and two rectangular structures. On the right, labeled "after", is the transformed point cloud, which is more elongated and has a different internal structure. A set of colored lines (red, orange, yellow, green, blue, purple) connects points between the two clouds, representing a learned mapping. In the top right corner, a small inset shows a set of source points (red) and target points (blue) used for learning this mapping.
