

The diagram illustrates a transformation of a graph structure, showing two states: 'before' and 'after'.

Before State: A vertical line on the left has 10 nodes. A horizontal line connects the 5th node from the bottom to the 6th node. A vertical line on the right has 10 nodes. A horizontal line connects the 5th node from the bottom to the 6th node. A vertical line on the far right has 10 nodes. A horizontal line connects the 5th node from the bottom to the 6th node. A vertical line on the far right has 10 nodes. A horizontal line connects the 5th node from the bottom to the 6th node.

After State: The structure is transformed. The vertical line on the left now has 10 nodes. The horizontal line on the left now connects the 5th node from the bottom to the 6th node. The vertical line on the right now has 10 nodes. The horizontal line on the right now connects the 5th node from the bottom to the 6th node. The vertical line on the far right now has 10 nodes. The horizontal line on the far right now connects the 5th node from the bottom to the 6th node.

Connections: Colored lines (red, orange, purple) connect nodes between the 'before' and 'after' states, indicating the transformation. A red line connects the 5th node from the bottom in 'before' to the 5th node from the bottom in 'after'. An orange line connects the 6th node from the bottom in 'before' to the 6th node from the bottom in 'after'. A purple line connects the 7th node from the bottom in 'before' to the 7th node from the bottom in 'after'.
