

The diagram illustrates a transformation from a 2D state to a 3D-like state. On the left, labeled 'before', is a simple rectangle. A vertical line extends from its bottom center to a point on a horizontal axis. On the right, labeled 'after', is a more complex structure consisting of a rectangle with a horizontal line through its center. A vertical line extends from its bottom center to a point on the same horizontal axis. Two red lines connect the top corners of the 'before' rectangle to the top corners of the 'after' rectangle. Two orange lines connect the bottom corners of the 'before' rectangle to the bottom corners of the 'after' rectangle. The horizontal axis is labeled 'before' and 'after' at its ends.
